

# Modular Tactics Training System (MTTS)

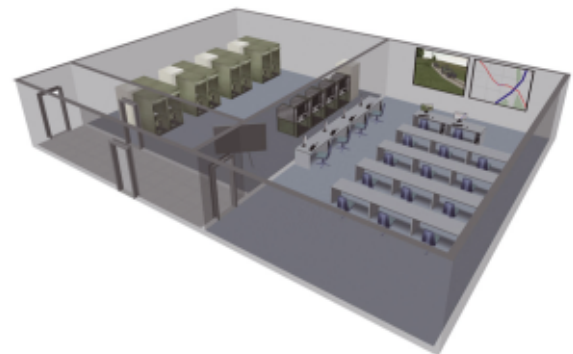

The Modular Tactics Training System (MTTS) provides the flexible and effective tactics training. Trainees use the vehicle, helicopter and infantry virtual simulators. Vehicle or helicopter crews use the simulators of the "Virtual Tactical Simulator (VTS)" category, thus it is possible to train the task force tactics, including the the training of the specialists and logistics and their mutual co-ordination.

## Proposal of the possible solution for the convoy and helicopter crews tactics training:

### The solution involves:

- 4x Reconfigurable Virtual Simulators (RVS)
  - configuration - transport and battle helicopter
  - configuration - Multi-Purpose Light Armoured Vehicle
  - configuration - Infantry Fighting Vehicle BMP-1/2
  - configuration - armoured carrier
  - configurations - car and truck
- 4x Team Leader Simulator (TLS)
  - dismounted commander configuration
  - dismounted infantry configuration
- 1x workplace for training control and evaluation
  - Tools for training control and evaluation
    - 2x projector and screen for the 2D map view and the 3D Stealth view
    - 2x PC workstation with the constructive simulation system for Computer Generated Forces (CGF) with the map view and the workstation for log
    - 1x PC workstation for the exercise statistics evaluation
    - 1x PC workstation with the logger for recording and replaying exercise logs
    - 1x PC workstation for remote management of the simulators and for the weather control
    - 1x Communication system control panel
    - 1x Broadcasting and time management systems
- Terrain databases and 3D models
- ASTRA communication system

### Provided supporting services:

- Training technical support
- Complete service

### Training capacity:

- Company or taskforce per week
